Verizon Terremark Enterprise Cloud
CREATING A MORE COLLABORATIVE ENVIRONMENT FOR YOUR APPLICATION & SOFTWARE DEVELOPMENT

ARE YOUR DEVOPS TEAMS GETTING THE SUPPORT THEY NEED TO DETERMINE THE FUTURE OF YOUR BUSINESS?

**Speed:** Do you have to borrow internal resources to develop an application? How does the time taken to deploy IT resources affect your project timelines? What if there was a way to slash deployment times without tying up capital? Would that increase your time to value?

**Scalability:** How do you spin-up test environments when needed and scale production servers when demand grows? What if there was a way to solve both problems in one, letting you add and remove resources at will?

**Secure Collaboration:** How many other developers, architects, and designers do you need to collaborate with? Would it streamline your development work if you had the right access policies built in from the start so you could easily move workloads securely between DevOps teams?

BENEFITS FOR YOUR BUSINESS

As a developer, time is always of the essence. Giving your DevOps teams the ability to self-provision their own development environments saves time at every stage and allows you to reserve IT resources for more critical operations.

Demand fluctuates, but one thing that remains constant is your need to get applications into production and deployed to employees and customers around the world, quickly and efficiently.

Our cloud solutions will enable you to create a shared development environment that allows developers to communicate, share ideas, and collaborate on projects. And with Verizon’s impressive security credentials, you can be confident that your intellectual property, applications, and data are protected.

WHY VERIZON?

We offer leading cloud solutions that deliver the speed, responsiveness, and cost efficiencies Application & Software Development teams need, with high levels of service, security, and reliability. The Verizon Terremark Enterprise Cloud allows you to self-provision your development environment and put applications into production faster. Our team of experts will help you be cloud-ready, and assist with the transition and migration to our cloud.
